

On-Site Inventory Management Solutions

ANIXTER Component Solutions

Products, Technology, Services... Delivered Globally

Anixter Component Solutions is a division of Anixter International Inc., a leading distributor of communication products, electrical and electronic wire and cable, fasteners and other small components. With a presence in over 50 countries, Anixter employs more than 8,000 people throughout the world.

‘Anixter Component Solutions can unlock the hidden potential in the total management of your fasteners and ‘C’ class components’

On-Site Inventory Management Solutions

The control and management of fasteners and ‘C’ class components is complex and time consuming in a manufacturing environment. Anixter Component Solutions has developed an Inventory Management system that supplies and maintains on-site ‘C’ class component stocks, freeing up your time to focus on your core business activities.

Over the past 40 years we have gained the reputation as a market leader in the supply and distribution of components and fasteners. This new service offers you even greater peace of mind that you will always have the right part in your stores at the right time.

How it all works...

Working with you we identify the parts to include in the system and your expected usage level. We then install a bin system free of charge at your location (or locations) each uniquely identified with a part number, description, box quantity and a bar code.

Based on your rate of consumption, we set up a scheduled visit to the location to check, record and replenish any used part. This information is fed automatically back into our system and we then generate an invoice for the parts you have used. This means that you are only paying for what you have used.

We ensure that the quantity in the bin never drops below an agreed minimum stock level and therefore you no longer need to worry about your production lines running out of product. In addition every batch is checked by us before it is supplied to ensure that you are always using a quality controlled product.

Our capabilities

- Component stock managed at your location
- Regular stock checks and replenishment
- Bar coded system for greater accuracy
- Consolidated invoicing
- Buffer stocks held at our warehouse
- Quality assurance to ISO9001:2008
- H & S to OHSAS:18001:2007

RS00412

The benefits

- Frees up your time to focus on your core activities
- Reduced capital investment in components and costs associated with carrying this inventory
- Reduced facility space offering the opportunity to downsize storage and handling plant costs
- Reduced overheads associated with managing large numbers of transactions
- Increased efficiency by freeing up workforce and facilitating the redeployment of labour
- Single point of control for all material receipt and storage deployment
- Eliminates production line shortages and delays
- Eliminates the associated costs of inspection and administration
